

Sailing Into Cosmic Destinations. Notes on the Mechanics and Thermodynamics of Novel Relativistic Sail Space Craft. Volume 2. (Paperback)

Filesize: 7.09 MB

Reviews

A top quality ebook and also the font employed was interesting to read. This is for those who statte there was not a worth studying. Your life span will probably be enhance when you total looking at this ebook.

(Billy Christiansen)

SAILING INTO COSMIC DESTINATIONS. NOTES ON THE MECHANICS AND THERMODYNAMICS OF NOVEL RELATIVISTIC SAIL SPACE CRAFT. VOLUME 2. (PAPERBACK)

[DOWNLOAD PDF](#)

Createspace, United States, 2014. Paperback. Book Condition: New. 279 x 216 mm. Language: English . Brand New Book ***** Print on Demand *****.This is the second of an ongoing series notes on the subject of novel polymode relativistic propulsion methods. The author has many additional thoughts and formulations to express on this subject. It is hoped that the careful or even casual reader of this book will be interested in the series of books yet to be published. The contents of this book include explicit and detailed expressions along with simple abstractive functional notation. The long-form expressions include numerical analysis type computational algorithms from which computer programs can be easily derived by those skilled in current art code writing for physics simulations. In this book, I present additional propulsion modes that are not covered in Volume 1. These are the: teleported energy mode, Standard Model and Mirror Matter Model cosmic neutrino background sail mode, Standard Model and Mirror Matter Model Magnetic field propeller mode, plug-In power mode, stepwise teleporting mode, inertial mass reduction mode, time crystal motivated rotational motion augmented mode, and mass-driver tube-based gamma factor enhancement mode. These additional modes are applicable for both the Light- String Sails and the Monolithic Sails covered in Part 1 A and Part 2 A, respectively. Also note that bold font is used for especially important text useful for interpreting the meaning of the formulations and other important aspects of the methods proposed herein. Multiple propulsion methods may be applied in one spacecraft. Multi-modal propulsion can be very beneficial for craft meant to travel cosmic distances in space and forward in time. Multimode propulsion is likely needed for such lengthy journeys because of unpredictable and unsuitable mass-energy distributions in the interstellar and intergalactic medium. The absolute and relative density distribution patterns and mass-energy...
